Digital Images DIRECT to your Cell Phone, PC, Tablet, Laptop or PDA via Internet

Video Surveillance
The „State of the Art", High Resolution, Color, Infra Red

Easy to use, inexpensive and mobile.

TheSmartFoX – the sophisticated Video Surveillance System.

Mobile Surveillance has never been so easy and affordable

Now you can view LIVE images and recorded video pictures from any location surveillance DIRECT to your Cell Phone, PDA and/or Laptop computer via the Internet. TheSmartFox system thru an integrated movement sensor can not only show the user clear and sharp digital images but can also inform the property owner of an „incident" by instant notification via SMS or a high priority e-mail message.

With this immediate alarm message an online access to the historical data base of stored images, the user can determine what course of action should be employed. IE: disregard the „incident", call the location under surveillance and inform your local Police, Fire Department etc. Alternatively, the „incident" can be routed AUTOMATICALLY to the local Police and/or Fire Departments for immediate dispatch.
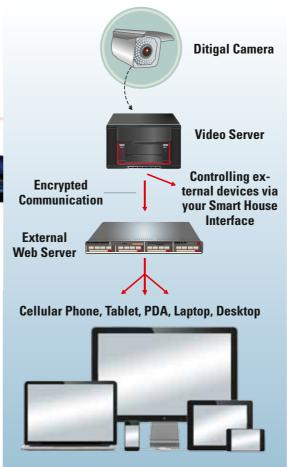

The system is modular and extendable and can also be integrated as a part of existing Smart Home system.

TheSmartFoX system is versatile

TheSmartFox system can be used at your business, privat home, vacation home etc. Anywhere, you want the ability to monitor „in real time" a specific location or object. All that is required is an electrical outlet an broadband connection to the Internet.

The Digital video surveillance cameras can be controlled remotely thru a user friendly interface via the internet to your cellular phone.

Ditigal Camera

Video Server

Encrypted Communication

Controlling external devices via your Smart House Interface

External Web Server

Cellular Phone, Tablet, PDA, Laptop, Desktop

Security guaranteed

Any „incident" will be IMMEDIATELY recognized and stored at two locations. One, at the locally installed Video Server and Two, at the external Web Server. The external Web Server is domiciled at a separate secure location where all the digital images are stored for a period of seven days and then archived to a long term storage facility. Plus, TheSmartFox application software has built in security logic which will not allow any unauthorized access. All images are stored digitally, therefore, the quality and resolution of the images are excellent and retrieval is instantaneous.

Configuration

TheSmartFoX system entails one to four high resolution infra red cameras. One Video Server which incorporates the application software and a hardware interface card which can deliver connectivity to TheSmartFox system from all types of external sensors at the location under surveillance.

The advantages at a glance

- Ease of use
- The device does not need any configuration
- Professional, secure system
- Interactive monitoring and control via a smartphone, tablet PC, laptop, PDA
- Automatic alerts via SMS or e-mail
- Modular and upgradeable
- Very cost effective:
  - Base package for rental or purchase
  - Monthly subscription for web hosting, 100 free SMS and software updates
